Dated:- 16<sup>th</sup> Sept. ,2016

To,

All Principal Secretary/Commissioner  
Department of Rural Development/Panchayati Raj  
All States/UTs

**Subject:- Significance of spacing between plants.**

Sir/Madam

As per Schedule I, of Mahatma Gandhi National Rural Guarantee Act, Para 4 (1), I. (v) "Afforestation, tree plantation and horticulture in common and forest lands, road margins, canal bunds, tank foreshores and coastal belts duly providing right to usufruct to the households covered in paragraph 5", and as per para 4 (1), II. (ii) Improving livelihoods through horticulture, sericulture, plantation, and farm forestry; are the permissible activity pertaining to plantation works under MGNREGA.

Trees are the assets which lasts for a long time. It was observed in many States that while conducting plantation works proper spacing was not maintained as per the objective of the plantation. Basically Spacing depends on the purpose with which the plantation is carried out or say on the objective of management, when one has to decide to go for the production of fuelwood, fodder, timber, or fruit production in a given area. Therefore spacing criteria as a guidance, for few plant species is provided in Annexure-1 and request to procure the spacing criteria for additional species planned in your State/UT from the concerned technical Department which are not included in the provided list.

Please do circulate the compiled information to the field functionaries at the earliest so as to conduct the plantation works under MGNREGA systematically.

Yours Faithfully

  
(Dr. Suparna S Pachouri)  
Director (MGNREGA)

## Annexure-1

### Significance of Spacing between plants –

The spacing criteria for few tree species while conducting Block Plantation under MGNREGA is provided in Table 1 and 2. The required spacing needs to be selected as per the objective of management for each plant specie.

**Table - 1 - Suggested spacing criteria for important Timber/Fuelwood/Fodder yielding tree species**

S.No	Plant	Plant spacing (m)	No. of plants per ha.
1	Teak ( <i>Tectona grandis</i> )	2.0 x 2.0	2500
		3.0 x 3.0	1111
